Kaba CheckIn

Convenience and security for a carefree stay, controlled by the latest technology.

Kaba CheckIn - the optimum solution for the management of your hotel rooms

Kaba CheckIn is impressively simple software for day-to-day management and programming of access cards for guests and personnel. Together with the award-winning Kaba evolo door components, simple solutions can be created for all access situations. The entire installation can be carried out quickly by your trusted Kaba partner following brief planning.

It's simple

The access cards are easily programmed with Kaba CheckIn at the reception using the desktop reader. If a guest requires more than one card, these are duplicated in seconds at the click of a mouse. All guests receive their individual, time- and room-specific card and can therefore use the main entrance, hotel elevator, their room, the fitness room or the health spa.

The intuitive user guidance with acoustic and optical (red/green) signalling of the door elements is an additional convenience aspect of Kaba CheckIn.

Advantages

- > Fast and easy installation of the battery-operated door elements.
- > The user-friendly software is available in many languages and enables efficient CheckIn/CheckOut.
- > Additional guest cards are duplicated easily and quickly.
- > Cards which guests have accidentally taken along automatically lose their authorisation. Through a service medium, lost cards also can be revoked during the stay.
- > The guest cards can be reused infinitely.
- > Seamless integration: mechanical keys can also be administered using the software.
- > Traceability of the door activities is possible if required, thanks to the audit trail.
- > Emergency opening: Emergency access cards or a mechanical locking cylinder can be integrated easily.
- > The privacy function can be implemented using a mechanical thumbturn cylinder.
- > Wide range: for each access area there is a suitable solution, whether for the room door, elevator, fitness room, wellness area or the underground car park.

award**

2011

iF product design award: Kaba sets great value on quality, functionality and design when developing its products.

In the first presentation in autumn 2010, the new products in the new timeless, straightforward design received great acknowledgement. The consistent corporate product design is inspiring, with its clear-cut design and high recognition value. Three products have been awarded the international iF product design award - the Kaba digital cylinder even received the iF GOLD award.

Reception area

Kaba CheckIn helps you to leave an outstanding impression:

Kaba CheckIn management software

- > No additional costs if a key is lost:
The expensive replacement of keys or lock cylinders belongs to the past. Each guest is given an access card with a defined validity period.
- > Controlled graphic overview of the room occupancy:
Graphics regarding the occupancy of all rooms can be called up at any time.
- > Intuitive operation of the software: No staff training is required, the language can be changed individually.
- > Simple traceability of door movements in the event of unusual incidents: The digital door components record all entries. Thanks to this, you are able to analyse who entered the room when, e.g. in case of damage, theft, etc.

Kaba desktop reader

- > Simple programming: Access media for guests can be programmed conveniently at the reception.
- > Flexible key management: Issue of access cards upon request of the guest. Multiple rooms per guest (suite function) and multiple cards per guest are also possible.
- > In the event of changes to the access authorisations of staff and guests, there are often insurmountable hurdles when using regular locking systems. In each case, every change or upgrade is very costly. Not with Kaba CheckIn, where programming flexibility goes without saying.
- > Simply connect the desktop reader to the PC using the USB connection and get started.

CheckIn mode: room- and time-specific programming of the guest cards.

CheckOut mode: the guest cards are eliminated with one click.

Room status: the room occupancy of is visible at a glance.
